Biology at Go Ape

Go Ape makes its home in the heart of local parks. Our small footprint allows us to share the forest's beauty with the plants and animals who give it life. This makes it a perfect place to observe nature along our trails. Here are a few of the many topics you can discuss with your students while out on our course:

Living vs. Non-living

Trees and Plants

Habitat Varieties

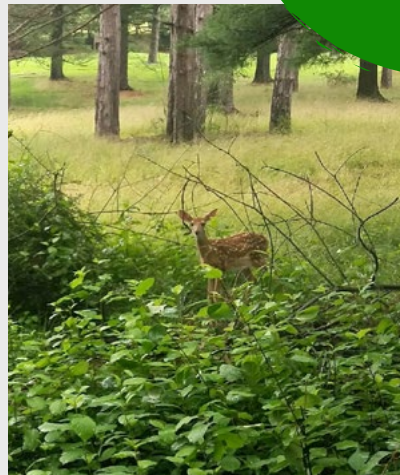

Biomimicry

The Food Web

Natural Processes

Learn more on how you can incorporate a biology lesson into an adventurous field trip to Go Ape!
